Team ID	SWTID-2026-3887
Project Title	AI-STUDYBUDDY
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform the way students study using artificial intelligence loan approval using machine learning, boosting efficiency improving understanding and exam readiness. It tackles scattered study material and the lack of and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and personal guidance, promising saved time, reduced stress and better results. Key features include happier customers. Key features include a machine learning-based credit model and real-time an AI doubt-solving chatbot, notes summarizer, quiz generator and smart study planner -making.

Project Overview	
Objective	To build an AI-powered study assistant that helps students clear doubts primary objective is to revolutionize the loan approval process by instantly, revise faster and stay organized through personalized implementing advanced machine learning techniques, ensuring faster and summaries, quizzes and study plans. more accurate assessments.
Scope	The project covers a web application with an AI doubt-solving chatbot, project comprehensively assesses and enhances the loan approval process notes summarizer, quiz and flashcard generator, study planner with incorporating machine learning for a more robust and efficient reminders, and a progress dashboard. system.
Problem Statement	

Description	Addressing Students struggle to clear doubts instantly, revise from scattered and inaccuracies and inefficiencies in the current loan approval lengthy material, and follow a consistent study plan, leading to stress and system adversely affects operational efficiency and customer poor exam performance. satisfaction.
Impact	Solving this will save study time, improve understanding and exam these issues will result in improved operational efficiency, Reduced confidence, and give every student affordable, personalized guidance risks, and an overall enhancement in the lending process, contributing anytime, anywhere. to customer satisfaction and organizational success.
Proposed Solution	
Approach	Employing using a large language model and NLP, AI-StudyBuddy understands machine learning techniques to analyse and predict Creditworthiness student queries, summarizes content, generates practice questions and creating a dynamic and adaptable loan approval system adapts study plans to each student's pace and weak topics.
Key Features	-- AI chatbot for instant, 24/7 doubt solving and explanations. Implementation of a machine learning-based credit assessment model.- Notes / PDF summarizer for quick revision.

	- Auto-generated quizzes and flashcards on any topic. -- Personalized study planner with smart reminders. Real-time decision-making for quicker loan approvals. - Progress dashboard that highlights weak topics. Continuous learning to adapt to evolving financial landscapes.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	2 vCPU cloud server (AI runs via T4LLM API, so no local GPU needed) GPU
Memory	RAM specifications	88 GB RAM GB
Storage	Disk space for data, models, and logs	150 TB GB SSD (cloud storage SSD)
Software		
Frameworks	Python frameworks	FlaskReact.js, FastAPI
Libraries	Additional libraries	scikit-learn, PyPDF, pandas, numpy, pandas, numpy, matplotlib, scikit-learn, LangChain, seaborn
Development Environment	IDE	Jupyter Notebook VS Code, Postman, Jupyter Notebook, pycharm
Data		
Data	Source, size, format	Kaggle User-uploaded notes (PDF/TXT), dataset, 614, csv UCI open Q&A datasets (JSON) dataset, 690, csv
